

MEMORANDUM

1605-71-1 (DACr 4)

Nov 79

Distribution List

CFAO 71-1  
REPORTING ATMOSPHERIC PHENOMENA

1. The subject CFAO indicates the OPI is DOC, yet all Ministerial Inquiries and letters from the public for UFO information are being directed to DAOT.
2. The practice of contacting DAOT is probably a hold-over from conditions prior to the 5 Nov 76 amendment of CFAO 71-1 when DAOT was replaced by DOC as OPI.
3. The CFAO states that meteorite and UFO sightings shall be reported by priority message to NDOC Ottawa with an information copy to National Research Council (Para 8 and 11). DAOT is not mentioned or addressed; therefore, I can determine no logical reason why this Directorate should continue to be the correspondence action agency on UFOs. DOC and DIS are considered the appropriate points of contact and future information requests received by DAOT will be redirected.

Monsieur:

J'accuse réception par la présente de votre lettre dans laquelle vous demandez des renseignements sur les OVNI; ladite lettre a été transmise à la Section de la planétologie du Conseil national de recherches (CNR). Le Conseil national de recherches est l'organisme gouvernemental chargé de la coordination et de la cueillette des renseignements relatifs à ces questions et vous recevrez une réponse sous peu.

Nous définissons un OVNI comme étant une manifestation visuelle inhabituelle que les gens ne peuvent identifier ou expliquer. Le ministère de la Défense nationale n'a aucune attribution directe à ce sujet, mais nous recevons chaque année des rapports à cet effet.

En 1978, par exemple, nous avons reçu en tout 150 rapports en provenance de divers endroits au Canada. Ces rapports ainsi que d'autres renseignements recueillis sont à la disposition du public au Conseil national de recherches.

Je vous remercie de votre lettre et vous souhaite bonne chance dans l'intérêt que vous manifestez envers les phénomènes spatiaux.

Veuillez agréer, Monsieur, l'expression de mes sentiments les meilleurs.

I have received your letter requesting UFO information and have sent it to the Planetary Sciences Section of the National Research Council (NRC). The National Research Council is the government agency responsible for coordinating and retaining information about such matters and you will receive a reply in the near future.

A UFO is defined as an unusual sighting which people are unable to identify or explain. Although the Department of National Defence has no direct responsibilities in these matters, this Headquarters does receive several reports each year.

In 1978 for example, we received a total of 150 reports from various places in Canada. These reports and other gathered information is available for public use at the National Research Council.

Thank you for your letter and I wish you success in your continued interest of space phenomena.

Yours truly,

In reference to your letter of 20 January 1979, with attached Toronto Star news item, I must inform you that none of the UFO reports received by this Headquarters are given a security classification.

As explained to you in DAOT letter of 15 July 1978, all reports of UFO sightings forwarded to National Defence Headquarters are subsequently relayed to the Planetary Sciences Section, Hertzberg Institute of Technology, National Research Council of Canada.

Sightings received by military bases across Canada, those reported by observers like yourself, and those reported directly to the Planetary Sciences Section are all on open public display at the National Research Council, and you may contact that Department regarding the content and details of such reports.

Yours truly,

RE: UFO SIGHTING, APRIL 6, 1978

Thank you for sharing this illuminating UFO report with us. Often, visual phenomena observed over the water are difficult to classify. Persistent research of the type you have undertaken may help solve these mysteries.

I wish you continued success in your endeavours.

Dear Sirs,

This letter is from a student  
in my class who has in fact been  
very interested in UFO's over a  
period of a year or so. Of course,  
it is very unusual for such a  
student to maintain an interest  
over such a period of time. If  
he could receive any kind of  
reply it would be terrific for  
his morale.

Thank you,

Dear Sir,

I beleave that by the time this letter reaches you, that you will have already received my U.F.O. sighting report by a Mr. Jim Coren of Mississauga Ontario, along with the report of an unknown by Durham Regional Police out in lake Ontario. Now the sighting of Mr. Coren was confirmed by a Mr. George St. Aubin of Oshawa Ont. I enclose a copy of his report of the sighting of Monday 3rd. July between 1:15 AM. E.S.T. and 1:30 AM. E.S.T. in the city of Oshawa near the 401 HWY in the south end of the city.

# An Oshawa Man Confirms Monday's UFO Sighting

By LESLIE WRIGHT  
Times Staff Writer

A second man has reported seeing some kind of unidentified flying object in the sky above Oshawa early Monday morning.

George St. Aubin of 323 Hillside Ave., has told The Times that he also saw a red fiery ball in the sky above Storie Park at 1:15 a.m. Monday.

Earlier this week, Jim Coren, of Mississauga, reported seeing a cigar-shaped fiery object in the same area as he drove through Oshawa at that time.

## MARKS FOUND

Coren and a private UFO investigator Tom Grey visited the area on Monday. By the time they left, Grey said he was convinced that worn circles

they saw in the grass at Storie Park were caused by the landing pods of a flying craft of some sort.

St. Aubin said he phoned The Times because he did not want people to think Coren was crazy because he reported seeing the object.

St. Aubin said he had just arrived home from camping about 1 a.m. Monday. He had a shower and when he looked out of the window 15 minutes later he saw the object from his window, he said.

## DISAPPEARED

He went to get his wife to show her but by the time they returned to the window, it was gone, he said.

St. Aubin's description of the object matches Coren's

description except that St. Aubin said it was round, not cigar-shaped.

St. Aubin said that the difference in the descriptions may be because from his house he saw what would be the back of any object.

Hillside Avenue is west of Storie Park. Coren said he saw the object from east as he drove along the 401 Hwy.

St. Aubin said he saw a round circle of fire that was "really red."

"All you could see around the ball was points," he said.

At first he thought the object must be a falling star, he said.

"But it was about 100 times bigger than a star," he said. "It was really low and didn't fall like a shooting star."

Dear Sir,

I wish to addvice you of two U.F.O. reports of Monday July 3rd. 1978 in this city. It does appear that both sightings are of the same object. The sighting took place in the south end of the city near the 401 hwy at 1:15 and 1:30 AM. E.S.T. and it did appear to have made a landing then took off and went out in to lake ontario, and disapeared. I will forward the confirmation of the sightings by OPP and Durham Regional Police , when I receive them .

## WEATHER FORECAST

# Clearing Tonight, Sunny Tuesday

TORONTO (CP) — Ontario weather forecasts at 6 a.m. EDT:

Synopsis: It will be sunny and warm in all of Ontario today except for cloudy periods and showers in the extreme north. The good weather is expected to continue overnight and into Tuesday.

Toronto: Variable cloudiness today, high 24. Clearing tonight, low 12. Mostly sunny Tuesday, high 26.

Windsor, Lake St. Clair, Lake Erie: Mostly cloudy today, high 22. Clearing tonight, low 13 to 15. Mostly sunny Tuesday, high 26.

London, Hamilton, Kitchener, Niagara, western Lake Ontario, southern Lake Huron: Variable cloudiness today, mostly sunny Tuesday. Highs today 23 to 25, lows tonight 10 to 12, highs Tuesday 26 to 28.

Peterborough, northern Lake Huron, southern Georgian Bay, eastern Lake Ontario, Haliburton: Variable cloudiness today, mostly sunny Tuesday. Highs today 23 to 25, lows tonight 9 to 11, highs Tuesday 26.

North Bay, Sudbury, northern Georgian Bay, Temagami, Cochrane: Variable cloudiness today and tonight, mostly sunny Tuesday. Highs today 25 to 27, lows tonight 11 to 13, highs Tuesday 27.

Sault Ste. Marie, Algoma, southern White River: Mostly sunny today and Tuesday.

## Long-Range Forecast

TORONTO (CP) — Extended Ontario weather forecasts:

Southern Ontario: Wednesday, mainly sunny, lows 12 to 16, highs 24 to 28. Thursday and Friday hazy, warm and humid, evening thunderstorms both days, lows 16 to 20, highs 28 to 32.

Central Ontario: Wednesday mainly sunny, lows 9 to 13, highs 24 to 28. Thursday increasing cloudiness, chance of a thunderstorm late in day, lows 12 to 16, highs 25 to 28. Friday showers and thunderstorms, lows 15 to 19, highs 22 to 26.

Northern Ontario: Wednesday mainly sunny, lows 8 to 12, highs 22 to 26. Thursday and Friday mainly cloudy with showers, thunderstorms near the Great Lakes, lows 12 to 15, highs 21 to 24.

Highs both days 25 to 27, lows tonight 13.

Northern White River, Geraldton: Mostly sunny today, sunny with cloudy periods Tuesday, chance of a thunderstorm late in day. Highs today and Tuesday 25 to 27, lows tonight 13 to 15.

Moose River: Variable cloudiness today and Tuesday, chance of a thunderstorm late in day Tuesday. Highs today 22, lows tonight 12, highs Tuesday 24.

Winisk: Mostly cloudy with occasional rain and drizzle today and Tuesday. Highs today 16 to 20, lows tonight 5 to 9, highs Tuesday 10 to 14.

Ottawa: Sunny today and Tuesday. High today 25, low tonight 13, high Tuesday 27.

## Search Fruitless July 31st

A search of Lake Ontario early today by Coast Guard and local marine rescue organizations failed to find evidence of a reported boat fire.

Capt. Jim Weldon of City of Oshawa Marine Rescue Association (COMRA) said Durham regional police sighted what appeared to be a boat on fire about three miles south of Thornton Road shortly before 1:30 a.m.

COMRA took to the water immediately and was later joined in the search by two Toronto Harbor Police boats and the Coast Guard cutter Spindrift which operates out of Trenton.

Weldon said a 20-mile area of the lake was searched by the four vessels but nothing was found. A helicopter from the Trenton base joined in the search at dawn, also with no results.

"What it was is anybody's guess," said Weldon, "the visibility was good."

"With a helicopter there is no way you can miss a boat," he added.

Monsieur,

Je vous remercie de votre lettre du 12 juin. En 1968, le Conseil national de recherches du Canada est devenu l'organisme chargé d'étudier et de rassembler tous les rapports à ce sujet. Le rôle de notre ministère se limite actuellement à l'observation d'incidents relatifs aux OVNI, incidents que nous signalons à cet organisme.

Je me suis donc permis de transmettre votre lettre à la section de la planétologie du Conseil national de recherches.

Par ailleurs, votre demande de renseignements sur Planification d'urgence Canada a été transmise au service intéressé, au MDN, qui prendra sans doute contact avec vous directement.

J'espère que ces renseignements vous donneront satisfaction.

Veuillez agréer, Monsieur, l'assurance de mes sentiments les meilleurs.

  
Le colonel A.J. Bauer  
Directeur de l'Instruction et des opérations aériennes

12 June 1977

Sir:

I would be grateful if you would send me some information on  
UFOs in Canada and on Emergency Planning Canada.

Yours truly,

②

Monsieur,

Prorisez vous m'envoyer des informations  
sur les (UFO) unidentified flying object au Canada  
et du service de préparation du public

Merci ?

mes sentiments les meilleurs

②

As requested in your letter dated 22 February, 1977, the correspondence and attached newspaper article have been reviewed. If I understand his letter correctly, in the light of former correspondence received in DND from ② is asking for financial support from the Canadian government in a flying saucer construction project. ② offers an article published in the National Enquirer to substantiate the feasibility of this project.

The scientific paper by Dr. J.P. Petit, referred to in the second paragraph of the Enquirer's article, has been obtained and reviewed. Dr. Petit has published several scientific papers in the fields of Cosmology and Plasma Physics. In this paper (copy attached), Dr. Petit speculates on the properties of some possible configurations for magnetohydrodynamic (MHD) generators. The whole paper is purely conceptual and hypothetical. It does not describe experimental results, it suggests the possible properties of hypothetical designs. Dr. Petit is a respected scientist and his article reflects a scientific approach: hypotheses are clearly stated and conclusions are conditional to the realization of the hypotheses.

After discussing several new MHD generator configurations, Dr. Petit suggests the possibility of using some of them for an airborne MHD power unit capable of travelling at supersonic speeds without generating a shock wave. However he also points out that "our current technology does not seem to allow us to envisage such a machine which would require a source of thermal energy of both low weight and small volume (a fusion generator)".

377

Current fusion generators weigh several tons, are extremely large, and operate only for a small fraction of a second at a time.

The Enquirer reports this same scientific article as a highly controversial paper in the eyes of the Académie des Sciences and claims it contains diagrams of a flying saucer.

However the facts seem to be: Petit's paper was just another paper presented at a normal session; it was not even notable enough to warrant being presented by Dr. Petit himself: Mr. A. Lichnerowicz presented it. The flying saucer diagrams are in fact a hand sketch of the hypothetical gas flow in a MHD generator (c.f. Figure 7). The small rectangles in the diagram are electrodes intended to collect the electric current "hopefully" generated, they are not "portholes". Moreover the diagram is purely illustrative; the apparatus to generate the magnetic field, the power source and gas supply for the ionized gas flow is not shown.

It thus seems that, at least for this particular paragraph, the Enquirer's article is a gross misrepresentation of the facts. Judging from the newspaper presentation of the scientific paper, I have serious doubts as to the exactness of the rest of the article. I am afraid that any hypothesis or possibility expressed by Dr. Petit has been transcribed as demonstrated facts by the Enquirer.

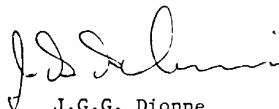

② I would suggest that a copy of Dr. Petit's article be sent to pointing out that, after consulting Petit's paper, it was evident that the second paragraph of the Enquirer's article was inexact and indicated a definite slant. Accordingly, one would be well advised to be very circumspect as to the overall credibility given to the whole article.

② should also be reminded that the technological and scientific knowledge available to us clearly indicate that it is not advisable to divert funds and effort to the development of "flying saucer" machines, particularly at a time when there are so many worthwhile problems requiring urgent attention: protection of the environment and energy conservation represent some of those problems.

I hope that the information provided will be useful to your office. If you feel that additional information would be required, I will do my best to provide it.

Yours truly,

378

J.G.G. Dionne  
Director Science & Technology

MAGNÉTOHYDRODYNAMIQUE. — *Convertisseurs magnétohydrodynamiques d'un genre nouveau.* Note (\*) de M. Jean-Pierre Petit <sup>(1)</sup>, présentée par M. André Lichnerowicz.

De nombreuses études, tant théoriques qu'expérimentales, ont été faites sur les accélérateurs et les générateurs MHD. Il semble pourtant que certaines configurations, associées à des valeurs élevées du paramètre de Hall, aient échappé jusqu'ici à l'investigation. Nous présentons donc ici des formules nouvelles de ces machines MHD, ayant des configurations elliptiques et hyperboliques, et tentons d'évoquer leurs applications possibles.

INTRODUCTION. — Les convertisseurs MHD qui vont être décrits ici sont basés sur la caractéristique géométrique suivante : considérons un système d'électrodes (voir fig. 1) créant dans un fluide conducteur de l'électricité un courant pariétal à symétrie radiale.

Fig. 1

Fig. 2

Introduisons un champ magnétique uniforme dont les lignes de force sont parallèles à l'axe du système (voir fig. 2). Si le paramètre de Hall excède l'unité, les lignes de courant vont prendre une forme spiralee. L'examen des forces de Lorentz agissant dans le fluide voisin de la paroi isolante montre que celles-ci sont, suivant la direction du champ B et suivant la polarité des électrodes, centrifuges (notre exemple) ou centripètes. A partir de ce schéma il est possible d'imaginer un ensemble de convertisseurs MHD aux propriétés originales.

I. COMPRESSEUR MHD. — La figure 3 décrit une enceinte fermée contenant un gaz. Deux des parois affectent la forme d'un hyperboloïde à deux nappes. La troisième paroi est cylindrique et porte une électrode  $E_1$ . La seconde électrode est placée sur l'axe du dispositif, qui possède la symétrie de révolution. Un champ uniforme B est créé par un solénoïde, également représenté. La décharge d'une puissante batterie de condensateurs dans cette enceinte, connectée aux électrodes  $E_1$  et  $E_2$  engendre un système de forces de Lorentz centripètes susceptibles de créer au centre, un plasma à pression et température élevées. Ceci peut présenter un intérêt, tant sur le plan fondamental que pour servir de base à une expérience de fusion par laser, l'énergie d'un laser de haute puissance étant concentrée sur le plasma ainsi créé.
